Signal Works Testing Module 5

Number of delegates: 6
Duration: 4 days plus 1 day one-to-one assessment per delegate
Location: Horsley Cross

Who should attend

This course is designed for delegates who plan to undertake a role as Test Assistant. It is for delegates who already have a railway signalling background and are familiar with basic circuitry.

Objectives

On successful completion of the training course the delegates will have a basic understanding of the following:

- What is expected of a MOD5 tester
- How to undertake inspections of cables/wires
- Wire count under direction of testers
- Using straps and applying false feeds in a controlled safe manner under direction of a tester
- Undertaking inspection and testing of HW2000 point machines and clamplocks under supervision of a tester
- Undertaking testing of track circuits under guidance
- Observing relay operation and identification
- Observing and reporting aspect testing
- Working in locations and interlockings
- Assisting during panel testing

Learning approach

40% classroom-based using diagrams, PowerPoint presentations and visual aids.
60% practical sessions working on a variety of equipment.
Theory and practical assessments are undertaken to verify delegates understanding.

Pre-requisites

Ideally the candidate should have attended a Diagram Reading course, SPWEE and a Basic Signalling One course or equivalent.
