

SMTH (Signal Maintenance Testing Handbook) Refresher course

Number of delegates: 4
Duration: 2 days
Location: Horsley Cross

Who should attend

The course is designed for delegates who already hold SMTH but require refreshing on the competences prior to attending the one day one to one assessment.

Evidence of a valid SMTH card is required prior to attending the course.

Objectives

Delegates will be refreshed on the following areas (assuming they already hold these competences):

- Core Skills
- Aspect Testing
- Points Testing
- Cable Function Testing
- Diversion of a Circuit

At the beginning of the session delegates will be provided with the pre-recertification theory test. In preparation delegates should read the latest SMTH and relevant parts of the Rule Book and SMS.

Learning approach

40% theory with pro-active scenarios and discussions to assist the delegates with their understanding.

60% practical sessions with demonstrations and time for delegates to practice and reinforce the theory sessions relating to the defined tests.

Pre-requisites

Delegates are expected to provide a copy of their current SMTH card together with evidence showing the pre-requisite of SEM1/2 or equivalent has been attended.

Note, no recertification pre-test training is provided or permitted – it is expected that at this level individuals should have this understanding prior to attending a refresher.

Should the delegate feel that additional training is required to successfully pass this pre-test then they need to attend the full SMTH Initial course.
