DC Track Circuits

Number of delegates: 8
Duration: 2 days
Location: Horsley Cross

Who should attend

Delegates who need to undertake fault-finding and maintenance of DC track circuits.

Objectives

By the end of this course successful delegates will be able to:

- Understand the principles of a basic DC track circuit
- Undertake track circuit testing as guided by Network Rail instructions
- Understand the working components of a DC track circuit
- Be capable of fault-finding and rectifying the fault
- Maintain the DC track circuit to Network Rail instructions

Learning approach

40% classroom-based using proactive discussions regarding diagrams and drawings.
60% practical-based on a live DC track circuit
Theory and practical assessments will be undertaken to check the delegates understanding.

Pre-requisites

Delegates are expected to have a basic understanding of the signalling industry and have experience of reading diagrams.
