Signal Works Testing Module 3BL

Number of delegates: 6

Duration: 4 days plus 1 day one-to-one assessment per delegate

Location: Horsley Cross

Who should attend

This course is designed for signal engineers who are already Works Verification testers and looking at progressing their careers to become Functional testers for location circuitry.

Objectives

On successful completion of the course delegates will be able to:

- Describe the principles of functional testing
- Carry out through testing of circuits
- Carry out changeovers of circuits
- Perform check marking of diagrams
- Perform location functional testing
- Carry out power supply testing
- Circuit function testing
- Perform strap and function testing
- Record and document test activities to the latest standards

Learning approach

30% classroom sessions with instructional demonstrations and practical exercises

70% practical working on live equipment under the supervision of the Instructor

Theory assessment followed by an independent one full day practical assessment on a variety of equipment.

Pre-requisites

Delegates should have achieved Module 3C competence and have a full understanding of wiring diagrams.
