

Silec Treadles

Number of delegates: 6
Duration: 1 day
Location: Horsley Cross

Who should attend

The course is designed for delegates who need to undertake installation or testing of Silec Type Treadles.

Objectives

By the end of this course successful delegates will be able to:

- Understand the difference between Cautor and Forfex type treadles
- Be capable of installing Silec treadles trackside
- Understand the working components of the treadles and how they interface with the signalling circuits
- Be able to set up the Silec treadle to the latest SMS and complete the relevant record card

Learning approach

40% classroom based using PowerPoint, proactive discussions, diagrams and drawings.
60% practical fitting a Silec treadle to the rails and testing it into service.
Practical and theory assessments will be undertaken to check the delegates' understanding.

Pre-requisites

Delegates are expected to have a basic understanding of the signalling industry and be able to read location diagrams.
